

# Fileexpert's Publishing Portal

The portal is designed to allow M-Files vault owners to share a controlled subset of their content with external stakeholders

## M-Files vault

To make your life easy all your content that you wish to share is secured in an M-Files vault on our portal servers. You can manage that vault in much the same way as your own vault(s)

The content is shared based on the permissions you decide, and you already know how powerful there are. So there is nothing new to learn.

## Safe and Secure

You decide what content to share with an option to remove items immediately if the need arises.

The portal is not directly linked to your vault which is held securely behind your firewalls. The content is pushed from your vault to the portal as required

Publish only PDFs if you choose and watermark them to ensure the provenance is preserved

## Personalise

You can use your own branding and colour palettes. Your own privacy, terms of use and conditions are optional but we provide defaults

If you want additional styling then that is possible as the site uses standard, open code that can be quickly modified.
